Abstract

This is the canonical abstract. Replace it with the manuscript abstract. It is shared across all journal builds unless a journal-specific override exists at `variants/<journal>/abstract.tex`.

1 Introduction

The introduction motivates the work and states the contribution. Cite with `biblatex`, e.g. a foundational result [1]. Section content lives in its own file under `sections/` so it can be reordered or overridden per journal.

2 Results

Results go here. Refer to figures and other sections with `cleveref`, e.g. Section 4 describes the procedure.

3 Discussion

The discussion interprets the results and situates them in the literature.

4 Methods

Methods describe the procedure in enough detail to reproduce it.
